

**01 September 2016**

**To whom it may concern**

Herewith we confirm that ADAMAS DRILLING has been contracted for triple tube HQ3 drilling, as part of geotechnical investigations for two civil engineering projects in Windhoek. The work was carried out during the 2<sup>nd</sup> half of 2015.

Apart from triple tube HQ3 drilling, Standard Penetration Tests were also carried out. Drilling and testing were done to depths of between 15m and 40m below ground level.

We regard the quality of work as adequate for the purpose, and appreciated the efforts of Adamas to provide good quality HQ3 soil and rock core samples.

Trusting the above will be in order.

Yours truly

For Geo-Logic Solutions cc
